The easy airport operations monitoring

Do you want to have access to SWIM or ADS-B data wherever you GO!? And do you want to monitor flight track performance, compliance, analyze trends over time and respond to community noise complaints?

If you want to do all of that and more but don't want a system that is difficult to learn and manage then Casper GO! is your solution. With our fully set up web-based application, Casper gives you the tools to do all of this without going through a months-long implementation process. Casper GO! can be set up and operational in a week requiring no local installation.

Key Features

 Advanced track analysis options

 SWIM or ADS-B data for your airport at your disposal

 Real-time flight data

 Integrated with noise complaint module

 Powerful and easy to use analysis and reporting

 Safe access from wherever you are

BENEFITS

 Intuitive and easy to use

 Set up and ready to use in one week

 Flexible and configurable

 100% cloud based solution

 Modular system

Casper GO! is designed as the "light" version of Casper Noise. Casper GO! is powered by the FAA's accurate and reliable SWIM or ADS-B data feed giving you full access to all flight tracks for your airport. It contains the same distinct features and benefits as Casper Noise but it is perfectly suited for airports that have a small staff that can work with a standardized installation and reports. Easy to set up and perfect for analysis and reporting on your airport's operations.

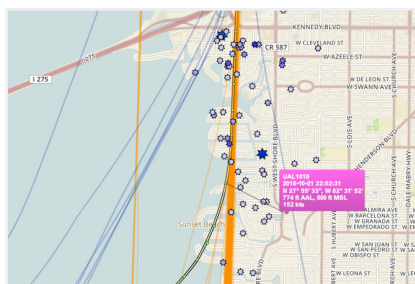

Flight Track Analysis

Casper GO! provides a powerful suite of flight track analysis tools that make it easy to monitor compliance with existing flight procedures, participation with voluntary noise abatement measures and to track trends over time. You can even play historic flight tracks to investigate specific events.

Easy Set Up

Casper GO! is configured and set up in a very short period of time. The system can be operated without extensive training and is easy to run reports or analyze flight tracks for any user. Through the modular set up the system can be easily expanded with additional services like (short-term) noise monitoring or a public flight tracking website.

Complaint Management

Casper GO! offers a complete noise complaint management module that logs all incoming complaints and greatly streamlines the complaint response and handling process by providing response templates that make it quick and easy for your staff to respond directly to the community.

Casper is an innovative provider of data analysis tools, transforming air and ground traffic data into valuable information and sharing this via our web solutions.
